

Minimize Your Pool or Spa Entrapment Hazards

The Drainsafe DS 360...Your Circle Of Safety

The DS 360 is certified up to 123 gallons per minute, *not to exceed 123 G.P.M.* The DS 360 is designed to shed hair away from the flow of water, thereby precluding hair entanglement. The DS 360 will not allow any object thicker than 3/8" to enter the sump on which it is mounted.

The DS 360 anti-entrapment main drain safety cover has been third-party tested and certified to the ANSI/ASME A112.19.8 "Suction Fittings for use in Swimming Pools, Wading Pools, Spas, Hot Tubs, and Whirlpool Bath Applications."

Constructed with 18oz of NSF 61 Certified PVC material that is UV protected and has superior chemical resistance. The Universal vertical or horizontal mounting design allows side wall protection as well as floor protection to all suction fittings. Any 8" sump as well as a cut-off pipe can be protected. *We recommend installing proper sumps during original construction as well as in remodeling projects.*

We suggest this unit be installed as one "layer of protection" and backed up with an (SVRS) Safety Vacuum Release System certified to: ANSI/ASME A112.19.17 Standard. The DS 360 is "Pool Cleaner Friendly" and allows for ease of brushing and vacuuming during maintenance operations.

With an open area of 27 square inches, the DS 360 allows for water to flow around and under the cover as well as through the top domed area for bottom water turnover. The overall dome design of the DS 360 also minimizes body entrapment.

This product includes a **12** piece easy to use 316 Grade Stainless Steel Uni-Screw® fastener kit and security attachment tool. Retrofit adaptors are available for 9"x 9" square drains.
